//////  
Credit(s) earned on completion of this course will be reported to **AIA CES** for AIA members.

Certificates of Completion for both AIA members and non-AIA members are available upon request.

This course is registered with **AIA CES** for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product.

---

Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.

# Learning Objectives

---

At the end of this course, participants will be able to:

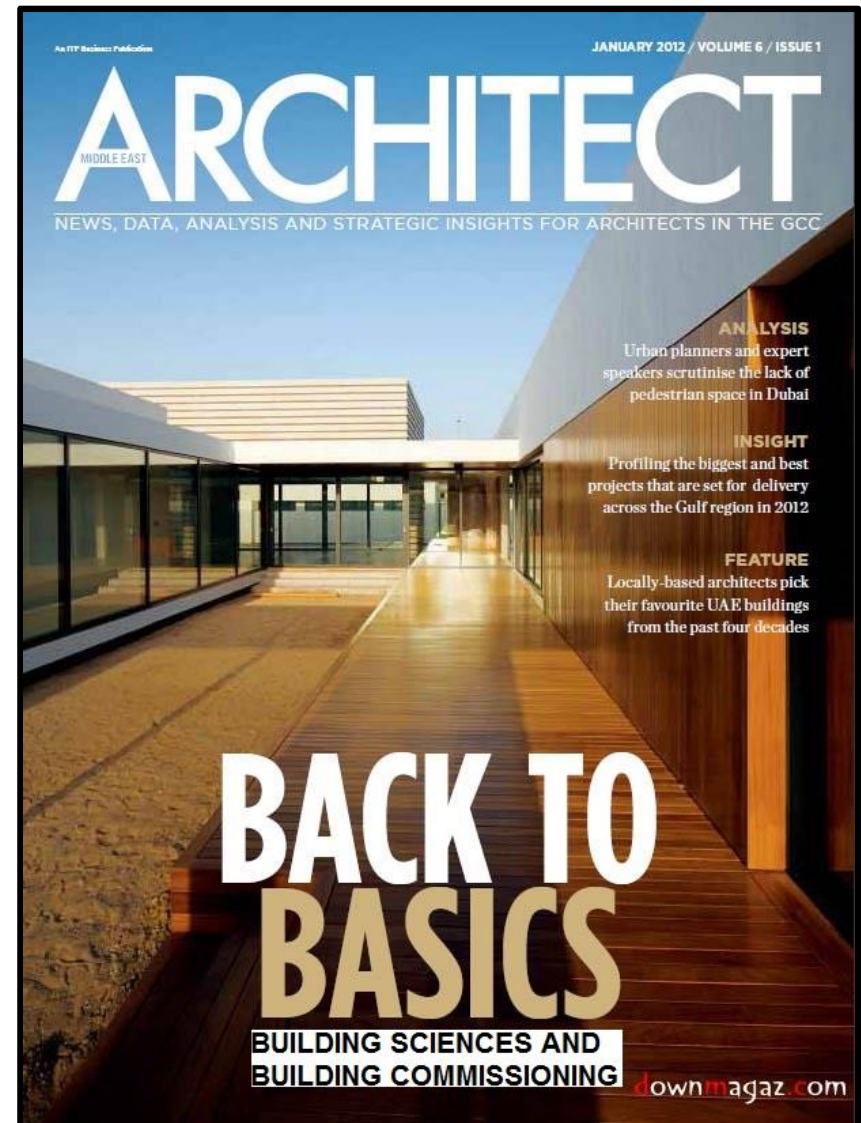

1. Understand the role of architects in the team of professionals involved in the commissioning of buildings.
2. Learn how architects, commissioning providers and test and balance agencies can effectively collaborate to ensure the construction of buildings meet or exceed the building owner's expectations for high-performing buildings.
3. Understand why architects need to have greater involvement in the commissioning process to meet construction objectives.
4. Learn how building owners benefit by having architects serve as their representative and voice in the team of professionals involved in building and systems commissioning.

# Course Description

---

The architect should be a key member of the commissioning team. Establishing stronger relationships between the architect, commissioning provider, and test and balance agency has the potential to ensure that high-quality, comprehensive services are provided. This session will discuss ways to engage the architect more fully in the commissioning process and make better use of their direct line of communication to the building owner.

# AIA

## Knowledge Community

---

*The goal of the TDBP is to promote architects as leaders in the application of building performance; in the use of high-performance design criteria, codes, and standards; and in programming, designing and managing building performance. To advance, disseminate, and advocate – to the architecture profession, AIA members, building owners, the construction industry, the academy, and the public – design practices that create buildings that are healthy, energy efficient, and durable.*

# AIA Cx Working Group Outline to AIA Board

---

1. AIA needs to accept that building commissioning is here to stay and that commissioning is not just about HVAC
2. The AIA is promoting and helping to shape the future direction of Cx
3. The AIA should educate our membership in understanding what commissioning is, where it currently stands in the built environment and commissioning as a supplemental service
4. AIA members are leaders in the BECx Process
5. The AIA is involved in developing the qualifications (certifications) of those taking leadership roles in Cx
6. AIA is engaged with other organizations in developing Cx processes, services and qualifications

# Draft AIA Position on Cx

## The Architect and Building Commissioning

Keeping the building commissioning and test and balance providers involved in the design process from its earliest phases will cut down on the risk of construction or commissioning mistakes that can add cost to the project and cause underperformance

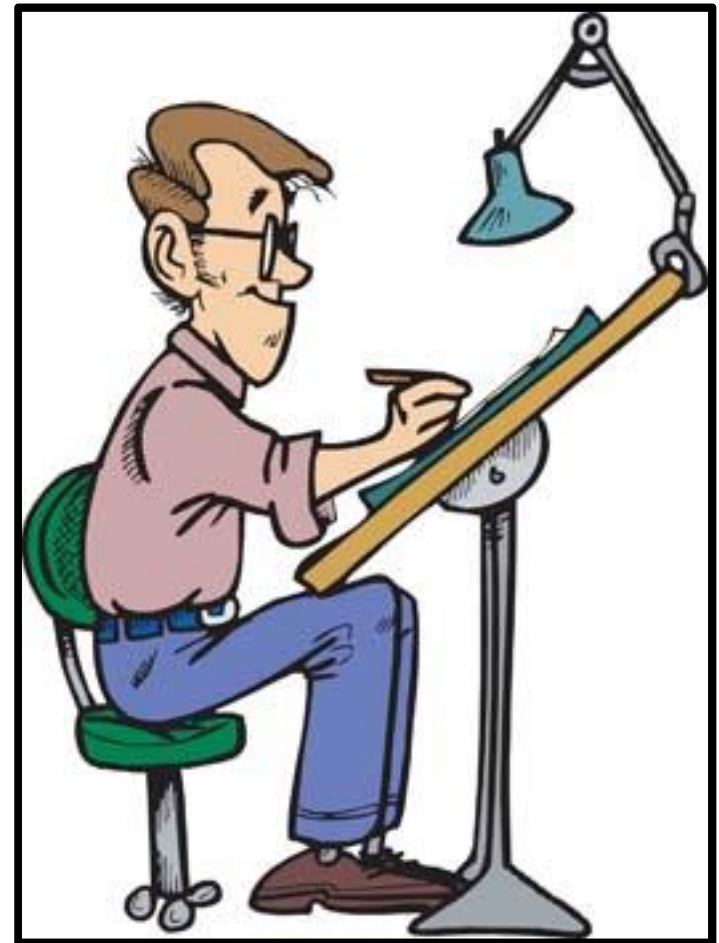

# Draft AIA Position on Cx

## The Architect and Building Commissioning

No matter how effective the design solutions, if they are not implemented correctly the project will risk missing its performance goals.

## **32 NAAB Curriculum Requirements**

### **6 areas related to Building Science and the Technical Rigors of Professional Practice**

- A. 1. Communication
- A. 2. Design Thinking
- A. 3. Visual Communication
- **A. 4. Technical Documentation**
- A. 5. Investigative
- A. 6. Fundamental Design
- A. 7. Use of Precedents
- A. 8. Ordering Systems.
- A. 9. Historical Traditions and Global Culture
- A. 10. Cultural Diversity
- A. 11. Applied Research
- B. 1. Pre-Design
- B. 2. Accessibility
- **B. 3. Sustainability**
- B. 4. Site Design
- B. 5. Life Safety
- B. 6. Comprehensive Design
- B. 7. Financial Considerations
- **B. 8. Environmental Systems**
- **B. 9. Structural Systems**
- **B. 10. Building Envelope Systems**
- B. 11. Building Service Systems
- **B. 12. Building Materials and Assemblies**
- C. 1. Collaboration
- C. 2. Human Behavior
- C. 3. Client Role in Architecture
- C. 4. Project Management
- C. 5. Practice Management
- C. 6. Leadership
- C. 7. Legal Responsibilities
- C. 8. Ethics and Professional Judgment
- C.9. Community and Social Responsibility
