AIA Provider Number 50111116

Exploring ASHRAE 90.4P, Energy Standard for Data Centers &  
Telecommunications

CXENERGY1534

Jeff Sloan, P.E., McKinstry Co.

Wednesday, April 29

//////  
Credit(s) earned on completion of this course will be reported to **AIA CES** for AIA members.

Certificates of Completion for both AIA members and non-AIA members are available upon request.

This course is registered with **AIA CES** for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product.

---

Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.

## Agenda (and learning objectives):

---

1. How does an ANSI consensus standard, like ASHRAE 90.4, become a law?
2. What sort of electrical advances in data center efficiency are becoming popular?
3. What sort of advances in data center cooling efficiency are becoming popular?
4. What are some commissioning best practices for efficient and reliable data centers?

### Copyright Materials

This presentation is protected by US and International Copyright laws. Reproduction, distribution, display and use of the presentation without written permission of the speaker is prohibited.

**Definition of data center:** A room or building, or portions thereof, with a primary function to house electronic equipment for the processing or storage of electronic data that has a design electronic data equipment power density exceeding **20 Watts/ft<sup>2</sup>** of conditioned floor area (215 Watts/m<sup>2</sup>).

BSR/ASHRAE Standard 90.4P

**First Public  
Review Draft**

## Energy Standard for Data Centers and Telecommunications Buildings

First Public Review (February 2015)  
(Draft Shows Complete Proposed New Standard)

This draft has been recommended for publication public review by the responsible project committee. To submit a comment on this proposed standard, go to the ASHRAE website at [www.ashrae.org/standards-research-technology/public-review-drafts](http://www.ashrae.org/standards-research-technology/public-review-drafts) and access the online comment database. The draft is subject to modification until it is approved for publication by the Board of Directors and ANSI. The current edition of any standard may be purchased from the ASHRAE Online Store at [www.ashrae.org/bookstore](http://www.ashrae.org/bookstore) or by calling 404-636-8400 or 1-800-727-4723 (for orders in the U.S. or Canada).

The appearance of any technical data or editorial material in this public review document does not constitute endorsement, warranty, or guaranty by ASHRAE of any product, service, process, procedure, or design, and ASHRAE expressly disclaims such.

© 2014 ASHRAE. This draft is covered under ASHRAE copyright. Permission to reproduce or redistribute all or any part of this document must be obtained from the ASHRAE Manager of Standards, 1791 Tullie Circle, NE, Atlanta, GA 30329. Phone: 404-636-8400, Ext. 1125. Fax: 404-321-5478. E-mail: [standards.section@ashrae.org](mailto:standards.section@ashrae.org).

ASHRAE, 1791 Tullie Circle, NE, Atlanta GA 30329-23

# 90.4P Title, Purpose and Scope:

## TITLE: Energy Standard for Data Centers and Telecommunications Buildings

PURPOSE: The purpose of this standard is to establish the minimum energy efficiency requirements of Data Centers and Telecommunications Buildings, for:

- a. design, construction, and a plan for operation and maintenance, and
- b. utilization of on-site, or off-site renewable energy resources

SCOPE: This Standard applies to:

- a. new Data Centers and Telecommunications Buildings or portions thereof and their systems,
- b. new additions to Data Centers and Telecommunications Buildings or portions thereof and their systems, and
- c. modifications to systems and equipment in existing Data Centers and Telecommunications Buildings or portions thereof

**Definition of computer room:** A room whose primary function is to house equipment for the processing and storage of electronic data and that has a design electronic data equipment power density exceeding **20 Watts/ft<sup>2</sup>** of conditioned floor area (215 Watts/m<sup>2</sup>).

## STANDARD

**ANSI/ASHRAE/IES Standard 90.1-2013**  
(Supersedes ANSI/ASHRAE/IES Standard 90.1-2010)  
Includes ANSI/ASHRAE/IES Addenda listed in Appendix F

# Energy Standard for Buildings Except Low-Rise Residential Buildings (I-P Edition)

See Appendix F for approval dates by the ASHRAE Standards Committee, the ASHRAE Board of Directors, the IES Board of Directors, and the American National Standards Institute.

This standard is under continuous maintenance by a Standing Standard Project Committee (SSPC) for which the Standards Committee has established a documented program for regular publication of addenda or revisions, including procedures for timely, documented, consensus action on requests for change to any part of the standard. The change submittal form, instructions, and deadlines may be obtained in electronic form from the ASHRAE website ([www.ashrae.org](http://www.ashrae.org)) or in paper form from the Manager of Standards. The latest edition of an ASHRAE Standard may be purchased from the ASHRAE Web site ([www.ashrae.org](http://www.ashrae.org)) or from ASHRAE Customer Service, 1791 Tullie Circle, NE, Atlanta, GA 30329-2305. E-mail: [orders@ashrae.org](mailto:orders@ashrae.org). Fax: 678-539-2129. Telephone: 404-636-8400 (worldwide), or toll free 1-800-527-4723 (for orders in US and Canada). For reprint permission, go to [www.ashrae.org/permissions](http://www.ashrae.org/permissions).

## Why have another Energy Code for data centers?

Does Standard 90.1 cover that?

HISTORY- Standards Project Committee (SPC) 90.4P was created as a result of industry disagreements over newly published requirements in Standard 90.1 related to computer rooms and data centers. The intended purpose of the 90.4 Standard was to create a performance based approach that would be more flexible and accommodating of innovative changes which rapidly occur in the data center design, construction, and operations.

# How does a proposed standard qualify to be an ANSI standard?

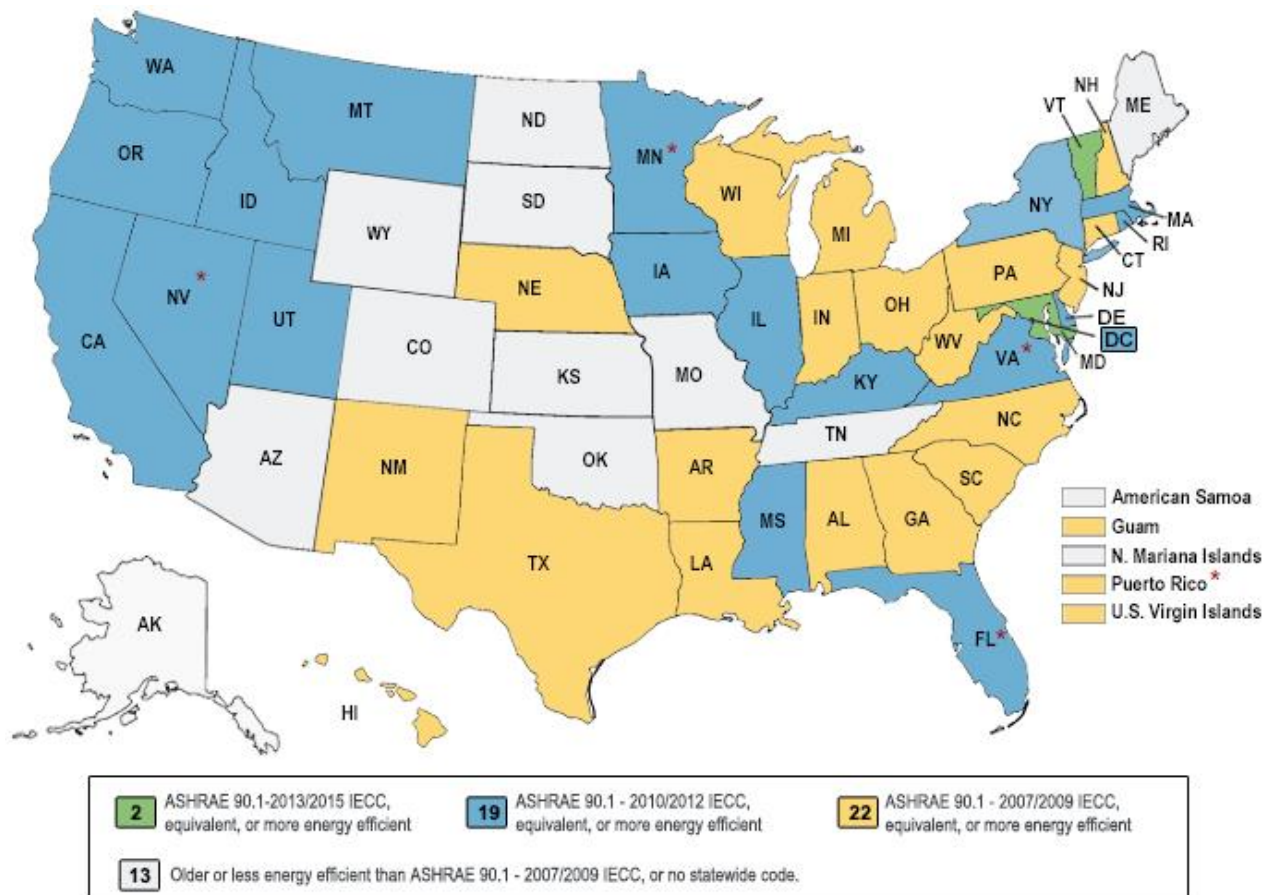

---

1. Consensus by a group that is open to representatives from all interested parties
2. Broad-based public review and comment on draft standards
3. Consideration of and response to comments
4. Incorporation of submitted changes that meet the same consensus requirements into a draft standard
5. Availability of an appeal by any participant alleging that these principles were not respected during the standards-development process.

# How does an ANSI energy standard become law?

Answer: adoption by a jurisdiction's authority.

# How stringent is the proposed 90.4 standard, out of the gate?

This is a performance standard, so it can be compared to the 90.1-2013 section 6.6 *Alternate compliance Path*:

Climate Zone	Representative City	ASHRAE 90.4 Electrical Efficiency Component	ASHRAE 90.4 Annualized Mechanical Efficiency Component	90.4 Resulting overall maximum annualized PUE <sub>1</sub>	ASHRAE 90.1 Alternate 6.6 Path PUE values
1A	Miami	62%	0.36	1.74	1.61
2A	Houston	62%	0.35	1.73	1.49
3A	Atlanta	62%	0.33	1.71	1.41

# What sort of electrical advances in data center efficiency are becoming popular ?

---

1. Higher efficiency UPS modules with overall efficiencies ~ 96% across load spectrum, without bypassing UPS
2. Very high efficiencies ~99% with UPS modules that can automatically bypass the double-conversion process
3. Avoidance of PDU transformers entirely, with 400Y230 distribution. Servers power supplies are more efficient, at higher input voltages, wire sizes slightly smaller
4. LED lighting, more reflective surfaces

# What sort of advances in data center cooling efficiency are becoming popular ?

---

1. Combinations of containment and economizer do save refrigeration energy and can also reduce tonnage (infrastructure cost)
2. Battery containment can provide the same benefits, in the UPS room.

# How does containment help cool data centers?

---

1. Traditional raised-floor or overhead ducted supply air doesn't lead to uniform temperature or relative humidity entering the IT equipment, see thermagraph below.
2. As a result, designers and operators often reduce supply air temperature. That harms economizer performance and reduces potential economizer savings.

# What does it take; to implement containment to save data center energy?

A continuous barrier between cool supply air and warm return air, all the way to the air handler. Commonly, a t-bar ceiling is suspended in the data center; then hot aisle containment (shown green, here) reaches up to the ceiling. Also, some method to reduce fan airflow to maintain a near-zero pressure across the containment.

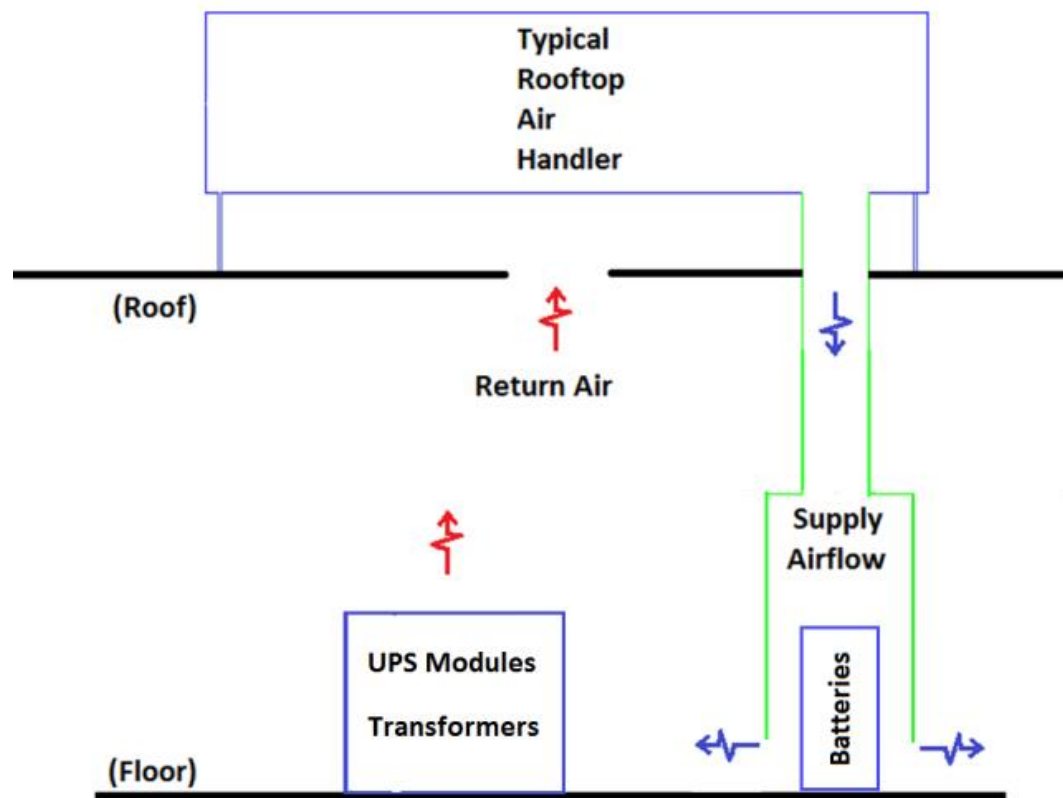

# What does it take, to implement containment to save data center energy?

It is also necessary to continue this containment barrier (still shown green) inside the cabinet, too!

## Similar savings are possible in UPS rooms with batteries:

Containment can be used with VAV cooling to supply air at the battery temperature of 75°F, while achieving a room temperature of 85°F or more.

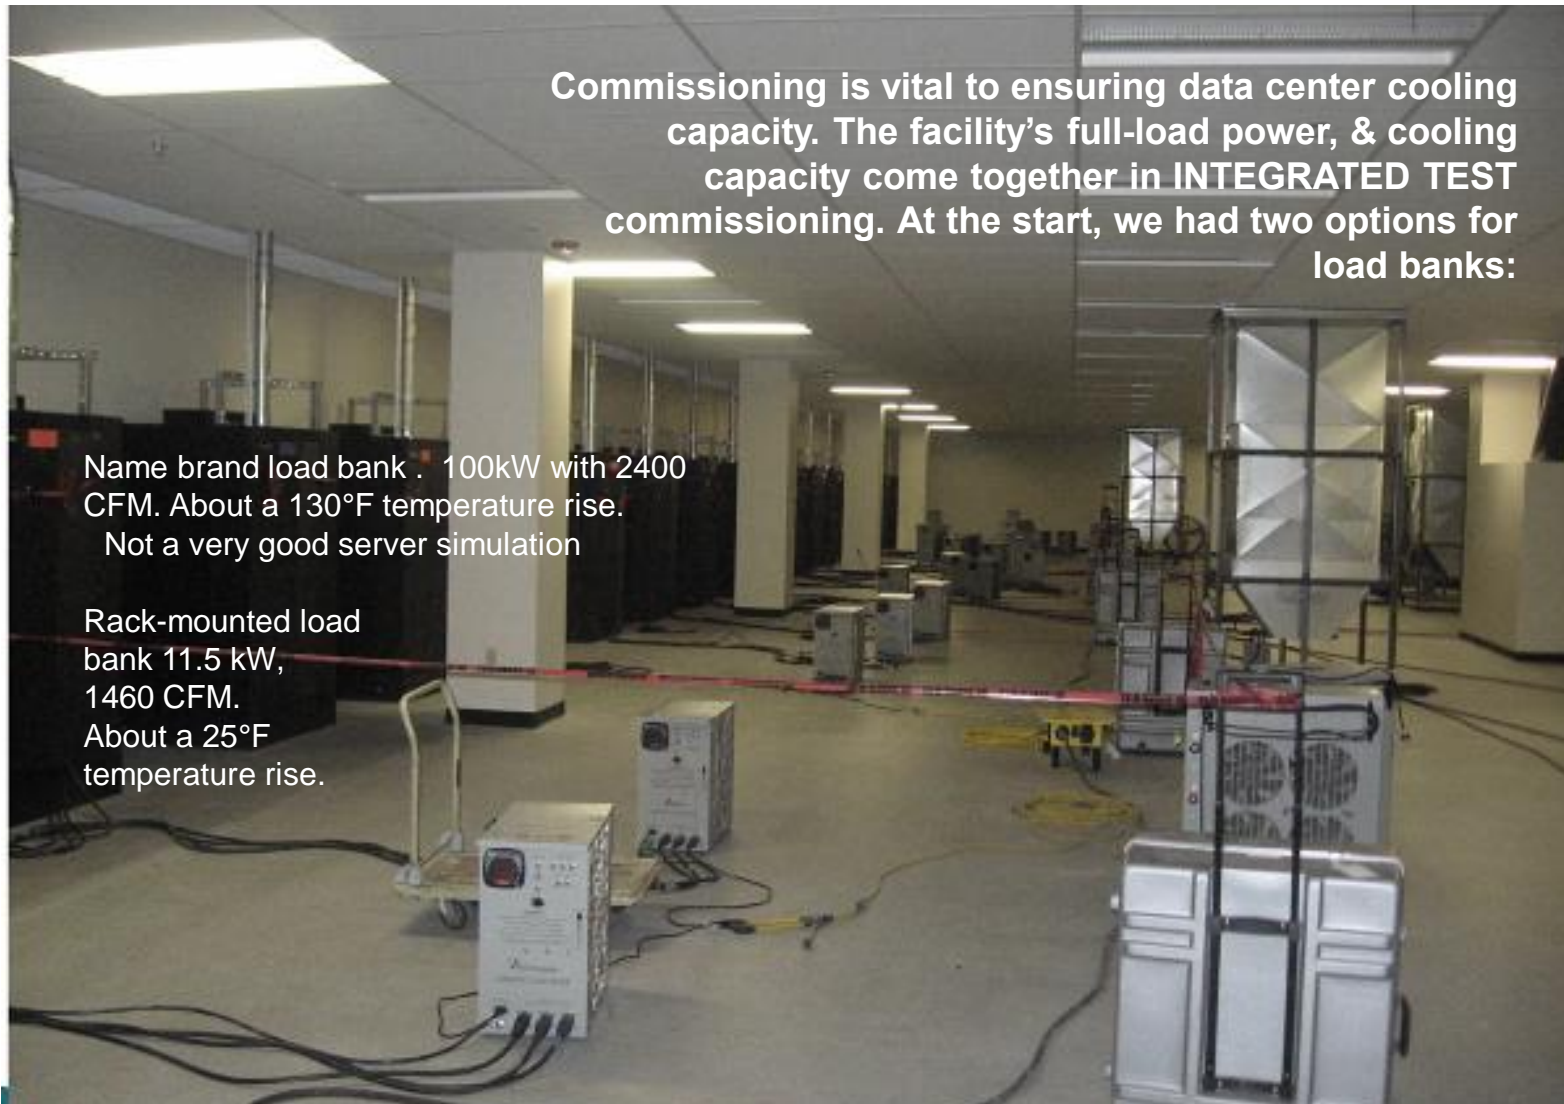

UPS room battery cabinet containment (shown in green, here) can be achieved with hanging plastic freezer curtain+strips.

# What are best practices to commission these energy-saving features:

---

# What are best practices to commission these energy-saving features:

---

Commissioning is vital to ensuring data center cooling capacity. The facility's full-load power, & cooling capacity come together in INTEGRATED TEST commissioning.

Here is an early attempt to produce uniform return air temperature for this test:

# At the Sabey Data Center (in Quincy WA);

These patented fan carts are now the standard method for integrated testing

The latest-version fan carts can readily produce the desired test AIRFLOW, with the desired test WATTAGE, using the facilities distributed 208V or 240V distributed power.

Easy, independent adjustment of fan cart airflow  
and its wattage.

Other uses for these fan carts:

PUE prediction at multiple loading conditions

Simulation of high density cabinets

Sabey QC3B example . 37kW racks

Uneven load testing

Airflow prediction . spot testing

# ENERGY STAR® Data Verification Checklist for Certification

# 100

ENERGY STAR®  
Score<sup>1</sup>

## Intergate Quincy, Building C

Primary Function: Data Center  
Gross Floor Area (ft²): 139,518  
Built: 2011

For Year Ending: 02/28/2015<sup>2</sup>  
Date Application Becomes Ineligible: 06/28/2015

As evidence of successful commissioning, the data center (now fully leased) has earned the highest national operating efficiency rating for the data center category!

1. Score is on a scale of 1-100. Application must be submitted to EPA within 4 months of the Year Ending Date. Award is not final until  
2. The ENERGY STAR Score is based on total source energy. A score of 75 is the minimum to be eligible for the ENERGY STAR.

Please use the *Licensed Professional's Guide to the ENERGY STAR® for Buildings* for reference in completing this checklist  
([http://www.energystar.gov/ia/business/evaluate\\_performance/pm\\_lp\\_guide.pdf](http://www.energystar.gov/ia/business/evaluate_performance/pm_lp_guide.pdf)).
